

AI Workflow Sidecar — Domain Workflow Prompt Template Packs

Overview

These templates are designed for AI Workflow Sidecar.

The goal is not task automation.

The goal is workflow continuity.

Each workflow pack helps preserve:

- * context
- * decisions
- * continuity
- * next actions
- * reasoning
- * work memory

The structure stays consistent across domains while the memory focus changes depending on the workflow type.

1. DEVELOPMENT WORKFLOW PACK

Resume Template

```text

You are helping resume an ongoing software development workflow.

Analyze the current project state and reconstruct the working context for fast re-entry.

Focus on:

- current architecture state
- recent implementation progress
- important technical decisions
- unresolved blockers
- dependencies or assumptions
- what the developer was trying to achieve

Generate a concise Development Resume that helps the next session continue immediately without rereading long conversation history.

Keep the output:

- structured
  - compact
  - high-signal
  - continuity-focused
- ```

---

### ## Next Template

```text

You are helping determine the next actionable engineering step in an ongoing development workflow.

Based on the current project state:

Identify:

- the most important next implementation task
- unresolved blockers
- technical priorities
- what should happen immediately next

Generate:

- a clear Next Action
- optional secondary actions
- implementation focus points

Keep outputs practical, executable, and easy to continue from.

```

---

## ## Anchor Template

```text

You are helping preserve critical engineering decisions from an ongoing development workflow.

Identify:

- important architectural choices
- technical tradeoffs
- reasoning behind decisions
- assumptions worth preserving
- constraints that influenced the direction

Generate concise Engineering Anchors that future sessions can quickly understand.

Focus on preserving:

- why decisions were made
- not just what was implemented

```

---

## ## Summary Template

```text

You are helping summarize a software development work session.

Generate a compact session summary that captures:

- what was completed
- major technical changes
- important discoveries
- unresolved issues
- current project direction

Keep the summary:

- concise
- readable
- easy to scan later

- optimized for future re-entry

`,`

Metadata Pattern

```yaml

---

version: v1

created\_at: YYYY-MM-DD HH:mm

workflow: development

kind: [resume | next | anchors | summary]

summary: Short description of current development state

keywords: backend, api, architecture, workflow, blockers

---

`,`

---

## # 2. WRITING WORKFLOW PACK

### ## Resume Template

```text

You are assisting with an ongoing writing and creative workflow.

Focus on preserving narrative and creative continuity.

Pay attention to:

- current narrative state
- emotional direction
- themes and tone
- important character or structural decisions
- unresolved creative questions
- next writing movement

Generate:

1. Writing Resume
2. Next Writing Direction
3. Creative Anchors
4. Compact Writing Summary

Keep outputs emotionally and structurally coherent for future continuation.

`,`

Next Template

```text

You are helping determine the next creative movement in an ongoing writing workflow.

Focus on:

- emotional continuity
- narrative momentum

- unresolved scenes or themes
- pacing and tone
- next meaningful writing action

Generate:

- a clear next writing direction
- optional supporting ideas
- continuity reminders

Keep outputs lightweight and creatively supportive.

```\n

---\n

Anchor Template

```text\n

You are helping preserve important creative decisions from an ongoing writing workflow.

Identify:

- emotional anchors
- thematic decisions
- narrative direction
- tone-defining choices
- recurring motifs

Focus on preserving:

- why the creative direction matters
- what emotional continuity should remain

```\n

---\n

Summary Template

```text\n

You are helping summarize an ongoing writing session.

Capture:

- narrative progress
- emotional developments
- important creative discoveries
- unresolved tensions
- next narrative direction

Keep outputs concise, emotionally coherent, and easy to continue later.

```\n

---\n

Metadata Pattern

```yaml\n

---\n

version: v1

created\_at: YYYY-MM-DD HH:mm

workflow: writing  
kind: [resume | next | anchors | summary]  
summary: Short description of current narrative direction  
keywords: narrative, tone, themes, continuity, emotional-flow  
---  
` ``

### # 3. RESEARCH WORKFLOW PACK

#### ## Resume Template

` ``text

You are assisting with an ongoing research workflow.

Focus on preserving reasoning continuity and investigative direction.

Pay attention to:

- current hypothesis
- recent findings
- unresolved uncertainties
- assumptions and evidence
- open research questions
- next investigation step

Generate:

1. Research Resume
2. Next Investigation Step
3. Key Findings and Anchors
4. Compact Research Summary

Keep outputs structured for long-term research continuity.

` ``

---

#### ## Next Template

` ``text

You are helping determine the next investigative action in an ongoing research workflow.

Focus on:

- unresolved questions
- weak assumptions
- evidence gaps
- next validation steps
- areas requiring deeper investigation

Generate:

- the most important next research action
- optional secondary paths
- uncertainty notes

Keep outputs analytical and continuity-focused.

` ``

---

## ## Anchor Template

```text

You are helping preserve critical reasoning and findings from an ongoing research workflow.

Identify:

- major findings
- strong assumptions
- weak points in reasoning
- important evidence
- conceptual shifts

Focus on preserving:

- why the conclusions matter
- what future sessions must remember

```

---

## ## Summary Template

```text

You are helping summarize a research session.

Capture:

- discoveries
- current hypothesis state
- unresolved uncertainty
- key evidence
- next research direction

Keep outputs concise, high-signal, and optimized for future continuation.

```

---

## ## Metadata Pattern

```yaml

version: v1

created_at: YYYY-MM-DD HH:mm

workflow: research

kind: [resume | next | anchors | summary]

summary: Short description of current research direction

keywords: hypothesis, findings, uncertainty, evidence, investigation

```

---

## # 4. DESIGN WORKFLOW PACK

## ## Resume Template

```text

You are assisting with an ongoing design workflow.

Focus on preserving design intent and usability continuity.

Pay attention to:

- current design direction
- user experience goals
- visual or interaction decisions
- unresolved UX problems
- feedback and observations
- next design iteration

Generate:

1. Design Resume
2. Next Design Action
3. Key UX Decisions
4. Compact Design Summary

Keep outputs easy to revisit during future iterations.

```

---

## ## Next Template

```text

You are helping determine the next design iteration step.

Focus on:

- usability improvements
- interaction clarity
- unresolved friction points
- visual consistency
- next design refinement

Generate:

- a clear next design action
- supporting iteration ideas
- continuity reminders

Keep outputs practical and user-experience oriented.

```

---

## ## Anchor Template

```text

You are helping preserve important UX and design decisions.

Identify:

- interaction principles
- visual direction

- usability assumptions
- design tradeoffs
- emotional experience goals

Focus on preserving:

- why the experience direction matters
- what should remain consistent

```

---

## ## Summary Template

```text

You are helping summarize a design workflow session.

Capture:

- design progress
- usability findings
- visual decisions
- unresolved UX issues
- next iteration direction

Keep outputs concise and optimized for future design continuity.

```

---

## ## Metadata Pattern

```yaml

version: v1

created_at: YYYY-MM-DD HH:mm

workflow: design

kind: [resume | next | anchors | summary]

summary: Short description of current UX/design direction

keywords: ux, ui, interaction, usability, design-system

```

---

## # 5. STRATEGY / PRODUCT WORKFLOW PACK

### ## Resume Template

```text

You are assisting with an ongoing product and strategy workflow.

Focus on preserving strategic continuity across sessions.

Pay attention to:

- current product direction
- key assumptions
- strategic decisions

- unresolved risks
- market or user insights
- next strategic action

Generate:

1. Strategy Resume
2. Next Strategic Step
3. Key Product Anchors
4. Compact Strategy Summary

Keep outputs optimized for long-term product thinking.

```\n

---\n

## ## Next Template

```text\n

You are helping determine the next strategic move in an ongoing product workflow.

Focus on:

- priority decisions
- unresolved product risks
- user understanding gaps
- strategic alignment
- next meaningful action

Generate:

- the most important next strategic action
- optional supporting directions
- continuity reminders

Keep outputs actionable and high-signal.

```\n

---\n

## ## Anchor Template

```text\n

You are helping preserve important strategic decisions.

Identify:

- product direction shifts
- key assumptions
- market insights
- strategic tradeoffs
- product philosophy decisions

Focus on preserving:

- why strategic choices were made
- what future sessions should not lose

```\n

---\n

## ## Summary Template

```text

You are helping summarize a product and strategy work session.

Capture:

- strategic progress
- important product decisions
- user or market insights
- unresolved risks
- next strategic direction

Keep outputs concise and optimized for future re-entry.

```

---

## ## Metadata Pattern

```yaml

version: v1

created_at: YYYY-MM-DD HH:mm

workflow: strategy

kind: [resume | next | anchors | summary]

summary: Short description of current product strategy direction

keywords: strategy, product, users, market, priorities

```

---

## # Final Note

The goal of these workflow packs is not to automate work.

The goal is to preserve:

- \* continuity
- \* reasoning
- \* direction
- \* work memory
- \* re-entry quality

The system should remain lightweight, human-readable, AI-readable, and continuity-focused.
